

Case Study

Domestic Client - Edinburgh

The Clients already had some existing play equipment however this was needing to be updated and any repairs made. Our brief was to work with what was already in place - to replace any timbers that were no longer considered safe and to add some new products.

Alterations to existing products.

Caledonia Play added three products to the existing tower:

Net Frame (1.3 x 3.0m)

16mm hemp rope net
with 2 x 10cm diameter timber poles side supports and 2 x half round pole stretchers

Climbing Ramp (0.65m x 3.0m)

Timber slats supported by 3.0m supports
Poly hemp pull rope

Climbing Rock Wall

Marine ply timber sheet
Poly resin rock climbing holds with metal washer inserted

The clients requested a specific colour scheme of the rock climbing holds on the rock wall and we were happy to provide this.

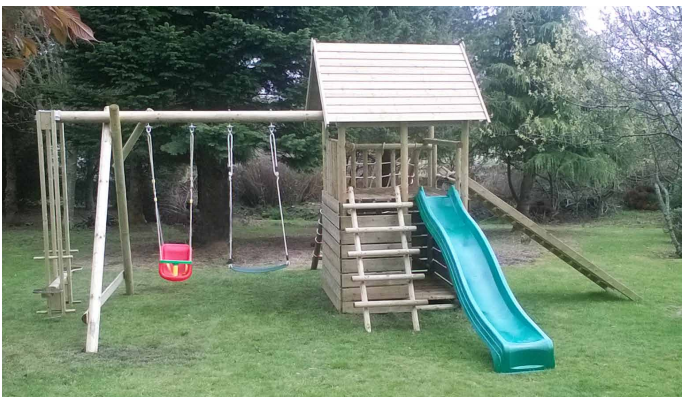

Caledonia Play also installed the following:

A Garden Play Fort with cargo Net and Swing Extension

There is a Push-Me-Pull-You, a Baby High Back Seat and a Sling Swing Seat on the swing extension. Swing seats will be changed as the children grow.

Family Basket Swing

Our Family Basket Swing is extremely robust using larger poles than our standard swing frames in order to support the heavy basket. The 1.2m diameter basket has an internal galvanised steel ring, 16mm herculean rope and is suitable for groups of children as well as adults to use.

The client's beautiful garden is an ideal place to for our products as, being made from timber, they blend well into the natural setting.
