

Case Study

Domestic Client - Ayrshire

Our clients were looking for outdoor play equipment to suit their garden space.

Following a few telephone conversations the client sent us a drawing of the available space. We were able to use and plan the equipment on the client's behalf without a site visit. It was decided that it would be preferable to install equipment in a long line.

The clients were looking to place the fort built as close to the fence as possible taking into account the necessary 1.5m safety area required around the fort and the 2m required in front of and behind the swings. This was possible and there was plenty of space at the front and side the play unit for the slide and the ramp to extend out. The clients had a second option in what they call the 'dog garden' which can get a little wet underfoot. It was decided not to use that area.

The clients were very pleased with the product once it was installed.

Caledonia Play installed the following:

Main structure: a Garden Play Fort constructed from quality timber with a 3.0m fibreglass wave slide, two access ladders and a climbing ramp with pull rope.

The swing element provided is a triple swing frame with extension. It has three double swing points and a single swing point on the extension.

Swing Seats

The client was able to choose the appropriate swing seats for the age of the children and decided on the following:

- Horizontal Tyre
- Trapeze Bar and Rings
- Toddler Swing Seat

Further Products

The client also decided to buy the Wooden Tidy Sandpit which is a firm favourite with younger children.

The client gave a lovely five star review on Social media:

Cannot explain how pleased we are with our garden play fort. Our kids are going to love it for a VERY long time. First class customer service and quality. Highly recommend!
